asbestos essentials

Non-licensed tasks

This information will help employers, including the self-employed, comply with the Control of Asbestos Regulations 2006, to control exposure and protect health.

It is also useful for trade union representatives.

Asbestos fibre causes lung cancer and lung diseases.

This sheet describes good practice when you need to remove asbestos paper linings, eg from a boiler casing.

It covers the points you need to follow to reduce exposure to an adequate level.

It is important to follow all the points, or use equally effective measures.

Only carry out this work if you are properly trained.

Main points

- Asbestos fibres can kill.
- Keep exposures low using all the controls in this sheet.
- See also sheets em1, em2, em5, em6, em7 and em8.

Removing asbestos paper linings

Access

- Minimise the number of people present.
- Restrict access - close doors, and use warning tape and notices.
- Ensure adequate lighting.

Equipment

- 500-gauge polythene sheeting and duct tape;
- warning tape and notices;
- sealant, low in hazardous substances such as solvent;
- sharp knife;
- garden type sprayer;
- small paint brush;
- bucket of water and rags; and
- asbestos waste container, eg labelled polythene sack.

Personal protective equipment (PPE)

- Provide:
 - disposable overalls fitted with a hood;
 - boots without laces (laced boots are hard to decontaminate); and
 - respiratory protective equipment - see sheet em6.

Procedure

- Isolate the power supply.
- Only work on a boiler that is cold.
- Protect surfaces in the restricted area from contamination. Cover with 500-gauge polythene sheeting and fix with duct tape.

Removal

- Carefully dismantle any casing that covers the lining, eg metal covers on a boiler.
- Protect vulnerable components with polythene sheeting, fixed with tape.
- Dampen the exposed paper.
- If possible, remove the paper whole. Otherwise, cut the paper - don't tear it - and dampen as you remove it.
- Put the paper in the waste container.
- Brush any paper you can't remove with sealant.

If you can't remove the paper whole, cut it - don't tear - and dampen it as you go.

Safety Checklist

- ✓ Can you avoid disturbing asbestos by doing the job in some other way?
- ✓ Do you need a license for the work?
- ✓ Always follow all legal requirements.
- ✓ Follow the task guidance sheet.
- ✓ Make sure other risks (eg work at height, manual handling) are assessed and controlled.
- ✓ Use only suitable asbestos waste containers.
- ✓ Double-wrap asbestos waste.
- ✓ Take asbestos waste to a licensed tip.

Caution:

- Don't sweep up dust or debris - use a Type H vacuum cleaner or wet rags.
- Don't take used overalls home.
- Don't re-use disposable PPE.
- Don't smoke.
- Don't eat or drink in the workplace.

Cleaning

- Clean the equipment and the area with wet rags.
- Put debris, used rags, polythene sheeting and other waste in the waste container.
- Tape the container closed.

Personal decontamination

See sheet em8.

Clearance procedure

- Visually inspect the area to make sure that it has been cleaned properly.
- Clearance air sampling is not normally required.

Essential information

Download and follow these advice sheets:

- em1 *What to do if you uncover or damage asbestos materials*
- em2 *Training*
- em5 *Wetting asbestos materials*
- em6 *Personal protective equipment (PPE)*
- em7 *Using rags to clean surfaces and equipment contaminated with asbestos*
- em8 *Personal decontamination*

Published by the Health and Safety Executive 09/06

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
